

WIRELESS COMMUNICATIONS I

Final exam 23.1.2015 (Full course material)

No material is allowed.

1. Explain briefly but in detail, what is meant with
 - a) Modulator
 - b) DPSK
 - c) Slowly fading channel
 - d) Coherence bandwidth
 - e) Channel equalizer
 - f) Multipath spread
2. a) You are using 4-level PSK in your system. How many bits you send in symbol? How many base functions are needed in this case to present the signal in signal space, and what are the properties of base functions?
 b) Principle of diversity and possible diversity methods
3. a) Principle of direct sequence spread spectrum system
 b) OFDM synchronization using cyclic extension?
4. Explain what is meant with i) unbiased estimate and ii) efficient estimate. Calculate Cramer-Rao lower bound for unbiased ML estimator of carrier phase when the received signal is

$$r(t) = A \cos(2\pi f_c t + \phi) + n(t) \quad 0 \leq t \leq T_0$$

where A and f_c ($\gg 1$) are known constants and $n(t)$ is zero mean Gaussian distributed white noise with one-sided spectral density of N_0 . It is also known that

$$\frac{\partial \Lambda_L(\phi)}{\partial \phi} = -\frac{2A}{N_0 T_0} \int r(t) \sin(2\pi f_c t + \phi) dt, \quad \cos^2 u = \frac{1}{2}(1 + \cos 2u), \quad \sin^2 u = \frac{1}{2}(1 - \cos 2u).$$

5. You are travelling from Rovaniemi to Helsinki without any hurry in four days. In the map below, you can find the possible routes. You will stay overnight as follows:
 1. night: Oulu or Kuusamo
 2. night: Vaasa or Joensuu
 3. night: Turku or Tampere.

Select the shortest route using Viterbi algorithm (4 p.). Draw enough intermediate steps so that the Viterbi algorithm idea can be easily seen. What is the length of the route (1 p.) and which places you will visit (1 p.)?

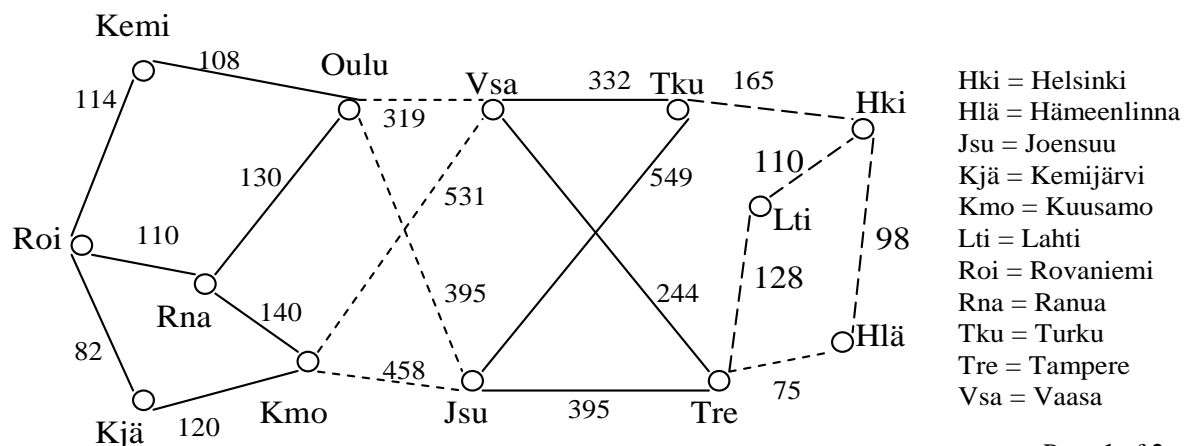

TABLE B.1 Complementary Error Function $Q(x) = \int_x^\infty (1/\sqrt{2\pi}) \exp(-u^2/2) du$
